

SERVICE BRIEFING: SPECIAL PROJECTS

Objectives

Special projects bring the all round information security skills and expertise of Safecomms into play to solve ad hoc security issues that our clients face from time to time.

Whilst the types of Special Projects are many and various, there is one common objective: to leverage Safecomms' practical experience and capabilities so as to ensure that the client receives the smartest and most cost effective solution to their problem in the shortest possible timescale.

Scope

The scope of Safecomms' Special Projects vary considerably. Examples of areas where Special Projects have been undertaken include the following:

Sarbanes Oxley compliance

Secure wireless implementation

AS7799 compliance

Managing security incidents

Security models for an "extended enterprise"

Securing the data centre

Setting a security strategy

Trouble shooting security device problems

Methodology

The methodology will clearly depend on the nature of the Special Project. However, in all cases the methodology will be defined at the outset, communicated clearly to the client, and implemented efficiently and effectively.

All work undertaken by Safecomms is subjected to Safecomms' rigorous internal quality assurance program.

In today's environment organisations can be faced with a wide variety of "one off" security issues that need tackling. They need to be able to reach for an expert who has all round expertise, practical experience, and ingenuity.
